

Open call for IUGS young reporters

The International Union of Geological Sciences (IUGS) is the largest and most prestigious geological organization in the world (<https://www.iugs.org/>) and we are searching for young amateur reporters that can represent us in outreach activities.

If you are an enthusiastic and motivated undergraduate student or early career geoscientist/journalist (up to 7 years of working experience), you can apply to become an IUGS Young Reporter! We are seeking amateur science communicators committed to raising awareness of the consequences of climate change, to share geologically relevant sites, and highlight geological hazards in their regions and/or countries, among other Earth Science-related topics.

You may submit your news in either video or essay form. Depending on your chosen format, you must thoroughly follow the instructions in either the "[How to make an IUGS video report](#)" or "[How to write an IUGS Young Reporter Essay](#)" instructions document.

All submitted news will be verified by an IUGS panel before being published on our [webpage](#) and e-bulletin. The IUGS is dedicated solely to our planet and to a better future for humanity; therefore, we will not accept news that involves:

- Sensitive topics on internal politics of any country
- News containing racial, xenophobic or homophobic comments.

Upon acceptance, you will receive a certificate acknowledging your status as an IUGS Young Reporter and an IUGS Reporter Business Card. After uploading your videos and/or essays, please inform us by writing to iugs.yori@gmail.com.
